Online First Now Available

The Geological Society's publish ahead of print system

What is *Online First*?

Online First is a feature offered through The Geological Society's electronic content platform, the Lyell Collection. It enables **Special Publication** articles to appear online soon after they have been accepted for publication and ahead of the printed volume.

All articles on the site are in their final PDF format apart from pagination, i.e. they have been accepted for publication, copyedited, typeset, proofed and corrected. The *Online First* release date serves as the official publication date. This date is provided in the citation line associated with the article.

To view the list of current *Online First* articles please visit: <http://sp.lyellcollection.org/online-first>

Within 6–8 weeks of the final article of a Special Publication being uploaded to *Online First*, the entire volume will transition to being a complete, paginated and indexed publication. Once posted online articles will not change from their published version (except by the addition of pagination). If any errors are identified then they will only be corrected by use of an erratum (as is the case for any published article). Citations using either the DOI or the bibliographic data will resolve to the paginated final article.

The *Online First* version of articles will be removed from the site when the complete paginated volume is published. Users will be able to locate the volume via the following page: <http://sp.lyellcollection.org/content/by/year>

Benefits

Online First offers clear benefits to authors and researchers:

- Reduced lead time between submission and publication
- Access to the very latest articles in the field
- Greater usage and exposure of articles, including earlier citation opportunities by related works

Access entitlements

Institutional subscribers to *Lyell Collection Complete*[†] or to the *Special Publications*[‡] can view the full text of all Special Publication *Online First* articles, but they will not enjoy perpetual access rights to this content unless the completed volume is published within their subscribed-to calendar year.

Content is also available via pay-per-view.

More information: www.geolsoc.org.uk/OnlineFirst

With the launch of the Lyell Collection module on Geofacets, the Geological Society of London and Elsevier team up to deliver cutting-edge science for oil and gas exploration.

More information: www.geolsoc.org.uk/geofacets

Archival access

All Special Publication volumes are available online on payment of an annual subscription fee (for the Special Publications alone, or as part of Lyell Collection Complete). It is also possible to purchase SP archives outright, comprising Volumes 1 to 300 for a one-off fee allowing perpetual access.

- ▶ 300 volumes available in three separate archives:
 - SP Archive 1: SP001 – SP100
 - SP Archive 2: SP101 – SP200
 - SP Archive 3: SP201 – SP300
- ▶ Or as a 300 volume set:
 - SP Full archive: SP001-SP300

The archives are hosted on the Geological Society's Lyell Collection, and there is no annual maintenance charge.

Corporate subscribers should note that the prices listed entitle them to access in all offices within one country (by IP address submitted by the subscribers' administrator). An academic subscription authorizes use at a localized site. Please contact Accucoms, PCG, EMPact Sales or the Society regarding global licenses.
