## ABOUT THE CONFERENCE

### WHY YOU SHOULD ATTEND

In 2008 our joint seminar will cover asset management. Once again the emphasis will be on practical issues with presentations by designers and client organisations covering the aims and methodologies of asset management and also a look to the future in respect of design and climate issues. Each year this seminar attracts a healthy number of delegates from all spheres of transport geotechnics. You will find plenty that is of interest in the presentations and formal discussions and there are opportunities for further interaction with a wide range of specialists during the breaks and around the commercial stands.

*"Once again the IHT/Engineering Group joint seminar will address a major current issue in transportation geotechnics. The topics covered will be of interest to all Engineering Geologists working in this sector. Delegates will have the chance to hear presentations from speakers at the forefront of asset management for transportation infrastructure and to participate in discussions with many other leading practitioners. It is good to see railways and waterways represented in this year's seminar."*

**Professor Jim Griffiths, Chair of the Engineering Group of the Geological Society**

*"The issues being addressed are of vital concern to all highways and transportation professionals involved in asset management and transportation infrastructure. I am pleased that the Highways Agency has chosen to endorse this conference, which I am certain will be of great interest and value to all Professionals working in this field."*

**Mike Slinn, IHT President 2007-2008**

### WHO SHOULD ATTEND?

This annual seminar attracts delegates from a wide variety of backgrounds and levels of experience from new graduates to the most respected people in their field. The topics and discussions will be of particular interest to geotechnical engineers and engineering geologists but will also contain much that is relevant to anyone involved in asset management in the transportation sector.
