Transportation is one of the largest contributors to the UK's carbon footprint.

## About the Conference

### Conference Objectives

Transportation is one of the largest contributors to the UK's carbon footprint. The need to improve our processes when implementing transport schemes to reduce our carbon footprint and make best use of available materials means that we constantly need to revise our practices and share knowledge of new techniques.

### Why you should attend

This conference provides an excellent opportunity to hear about new developments transport authorities are implementing to reduce the carbon footprint of transportation schemes. The conference also provides an opportunity to hear about the latest methods of carbon management and carbon accounting. The afternoon session will provide delegates with an opportunity to listen to case studies in the practical application of real solutions aimed at reducing the environmental impact of transport engineering projects.

### Who should attend

- Highway engineers
- Transportation consultants and contractors
- Local highway authority officers
- Consultants
- Local authorities
- Academics and students

**There are exhibition opportunities available at this conference. Please contact us via [conferences@ciht.org.uk](mailto:conferences@ciht.org.uk) for further information**

NB: The conference will count as one full day towards individual Continuing Professional Development requirements
