Introduction:

The Harbour Area Treatment Scheme (HATS) Stage 2A comprises three parts, which include the upgrading works for Stonecutters Island Sewage Treatment Works (SCISTW), upgrading works for eight preliminary treatment works in Hong Kong Island and construction of a sewage conveyance system.

The upgrading works for SCISTW involve the construction of the World's largest underground pumping station for chemically enhanced primary treatment works, a tunnel connecting the existing and the new pumping stations, 8 nos. of additional double-tray sedimentation tanks, new sludge dewatering facilities, a new effluent tunnel, 9 nos. deodorisation units, disinfection facilities, covers to existing sedimentation tanks, a new control system and other ancillary facilities.

The on-going construction activities include construction of the main pumping station, construction of the sludge dewatering facilities, and lining works for the effluent tunnel.

Safety Requirements:

All attendees should bring their own safety boots and hold a valid safety Green Card (or HKIE Corporate Membership Card). Safety helmet and reflective vest will be provided on site.

(Please note that neither the Society nor the parties concerned accept any liability in connection with the above event)
