

Hybrid Conference

26 – 27 February 2026

Analytical Microscopy in Earth and Planetary Sciences
CONFERENCE PROGRAMME

The Geological Society

Supported by

Mineralogical Society of the UK and Ireland

Headline sponsor

BUEHLER

THANK YOU TO OUR CONFERENCE SPONSORS

Headline Sponsor

BUEHLER

Buehler, a division of Illinois Tool Works (ITW), is a global leader in materials preparation, testing, and analysis solutions. Founded in 1936 and headquartered in Lake Bluff, Illinois, the company provides scientific equipment, consumables, and laboratory services used in metallography, materialography, hardness testing, and petrography. Its Wilson hardness product line reflects more than a century of innovation in mechanical testing. With operations across North America, Europe, and Asia, Buehler supports quality control and research laboratories worldwide through durable equipment, expert training, and customer driven advancements in microstructural analysis.

Buehler machines used in petrography and electron microscopy (EBSD)

VibroMet 2

- **Vibratory polisher** for multiple samples
- Prepares high quality polished surfaces, **e.g for EBSD analysis**

SimpliVac

- **Advanced vacuum system** for epoxy mounting
- Superior pore impregnation
- Ideal **for petrography** applications

IsoMet High Speed Pro

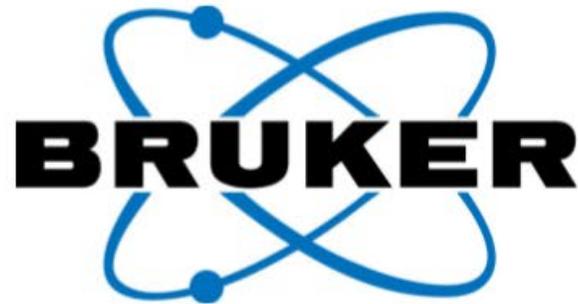

- **Automatic precision sectioning**
- Precision alignment to an **accuracy of 1 micron**, which is crucial for analysis

For further questions meet us
at the **lower library** at our booth.

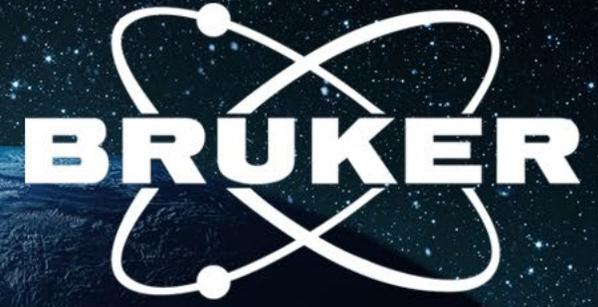

THANK YOU TO OUR CONFERENCE SPONSORS

Getting Into Multi-Dimensional Detail

Elemental and Structural Characterization of Earth and Planetary Materials

Electron Microscope Analyzers
EDS, WDS, EBSD, Micro-XRF on SEM

M4 TORNADO PLUS
Micro-XRF Spectrometry

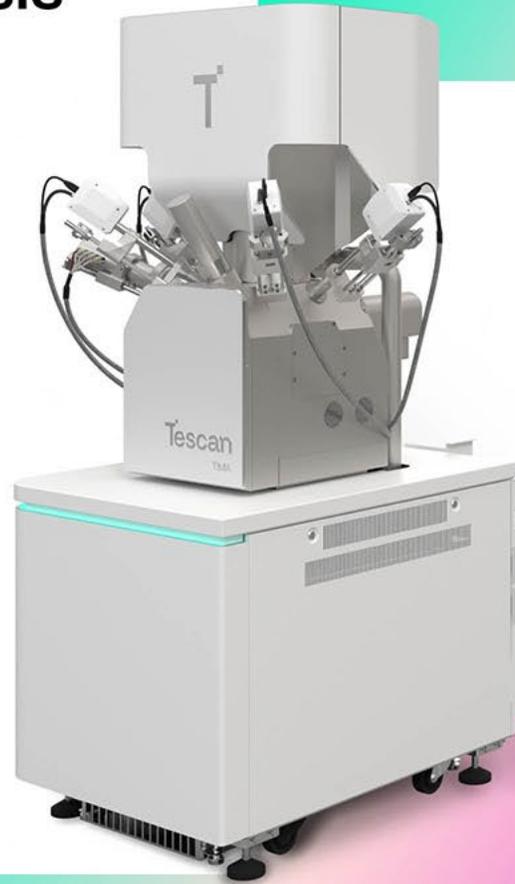

X4 POSEIDON
X-ray Microscopy

0930 – 1000	Registration & Coffee	
1000 – 1010	Welcome Address	Natasha Stephen, <i>Geological Society of London</i>
1010 – 1100	Keynote: Precise quantitative mineral analysis by EDS-SEM	Johan Lissenberg, <i>Cardiff University</i>
SESSION ONE		
1100 – 1120	No WDS? No Problem! Why Do Geoscientists Continue to Overlook EDS?	George Stonadge, <i>Oxford Instruments</i>
1120 – 1140	Element mapping of the lawsonite to epidote transition	Sara Hanel, <i>University of Minnesota</i>
1140 – 1200	From Sparse Measurements to Full Maps: Machine Learning Prediction of Mineral Phase Data	Julia Schmitz, <i>MaP - Microstructure and Pores GmbH, Germany</i>
1200 - 1210	Automated Mineralogy as a part of complex analytical workflows	Marek Dosbaba, <i>Tescan</i>
1210 – 1230	Break	
SESSION TWO		
1230 – 1250	Quantifying Facies-Controlled Pore Connectivity in Heterogeneous Porous Media with Alloy Intrusion Porosimetry (AIP)	Joyce Schmatz, <i>MaP - Microstructure and Pores GmbH</i> & Julia Schmitz
1250 – 1310	SEM-BEX Mapping on Unprepared and Uncoated Samples: did we find the oldest extraterrestrial zircons?	Alexandra Stavropoulou, <i>Oxford Instruments</i>
1310 – 1330	The Importance of being oriented: a review of thirty years of Electron Backscatter Diffraction research in Earth and Planetary Sciences	John Wheeler, <i>University of Liverpool</i>
1330 - 1430	Lunch	
COMMUNITY UPDATES		
1430 – 1445	High resolution structural and chemical analysis at the electron Physica Sciences Imaging Centre	Chris Allen, <i>ePSIC (virtual)</i>
1445 – 1500	Imaging & Characterisation at the Henry Royce Institute: Facilities and Access	Alexander Massey, <i>Henry Royce Institute</i>
1500 – 1515	The Space Nanomaterials atom probe (SNAP) providing an atoms eye view of the Solar System	Luke Daly, <i>University of Glasgow</i>
1515 – 1530	An Update for the Microscopy Community from EPSRC	Neil Robinson, <i>EPSRC UKRI</i>
1530 – 1600	Break	
1600 – 1610	Automated Mineralogy: Faster, Smarter geological insights with MapsMin	Salomé Larmier, <i>Thermo Fisher Scientific</i>

Tescan TIMA

The combined Automated Petrography and Microanalysis solution for Geoscientists

- Identify and quantify minerals automatically
- Correlate high-resolution BSE, elemental maps, and cathodoluminescence images
- Analyze thin-section scale samples with reproducible results
- Pinpoint locations of specific minerals
- Understand chemical variability across grain populations and bulk sample composition
- Estimate presence of elements not detected by EDS

Compositionally zoned garnet with abundant inclusions in eclogite rock.

VIRTUAL POSTER SESSION

1610 – 1620	Resolving Mixed Spinel Signatures with EPMA Element Mapping in Metasomatized Peridotites	Danielle Carr, <i>University of Texas at Arlington</i>
1620 – 1630	Linking olivine crystal-preferred orientations to deformation: EBSD evidence from the Songshugou Peridotite Massif (North Qinling, Central China)	Hongyuan Zhang, <i>China University of Geosciences (Beijing)</i>
1630 – 1640	High-resolution Scanning Electron Microscopy Imaging in Mudstone Thin Sections with Different Metallisation Alternatives	Mateus A Rodrigues, <i>Fluminense Federal University</i>
1640 – 1655	Lighting session	
1655 - 1830	Poster session & Drinks Reception	

Posters

Resolving Mixed Spinel Signatures with EPMA Element Mapping in Metasomatized Peridotites	Danielle Carr, <i>University of Texas at Arlington (Virtual)</i>
Telling the time with SEM-EDS: Application of quantitative EDS to diffusion chronometry	Joe Gardener, <i>University of Liverpool</i>
The macroscopic and microscopic mineralization controlled by the Yanshanian movement surface in the Xitian area, Hunan Province, South Central China	Hongyuan Zhang, <i>China University of Geoscience, Beijing (Virtual)</i>
Quantifying Porosity and Mineralogy in Rock Samples through Integrated SEM/EDS and Machine Learning Approaches	Joyce Schmatz, <i>MaP - Microstructure and Pores GmbH</i>
High-resolution Scanning Electron Microscopy Imaging in Mudstone Thin Sections with Different Metallization Alternatives	Renan de Melo Correia Lima / Mateus A. Rodrigues, <i>Fluminense Federal University (Virtual)</i>

Delivering world-leading imaging technologies

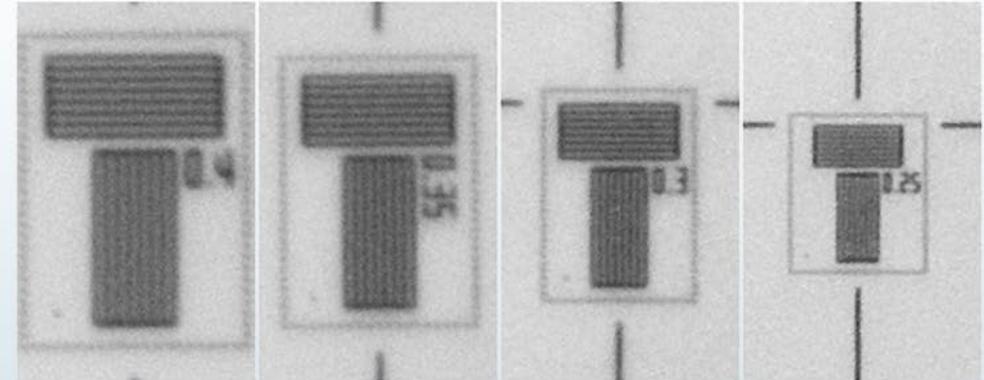

Wonderful Scientific is a sales and consulting company specialising in scientific and clinical imaging scanners.

Wonderful Scientific is the proud distributor of NeoScan benchtop Micro-CT and Nano-CT products in the UK and Ireland. We are committed to providing the highest quality instruments to our customers.

NeoScan scanners are the most advanced and innovative in the market. The recently launched N90 is the World's first bench-top Nano-CT and has 300nm spatial and 40nm voxel size at maximum resolution.

This compact and low weight scanner can fit in any laboratory, making it a truly 'personal' nano-CT. With a dual-detector configuration and an integrated full-field micro-XRF module, it provides both 3D structural visualization and elemental composition analysis in a single system. Designed for precision and ease of use, the N90 enables non-destructive imaging for a wide range of materials.

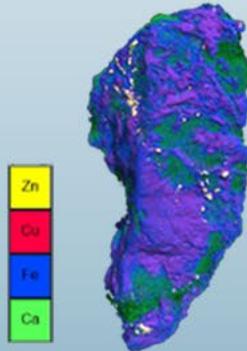

The resulting benefits make it the most robust, long lasting, scientific grade bench-top nano-CT on the market today.

Superior characterization of geological samples with spherical indexing

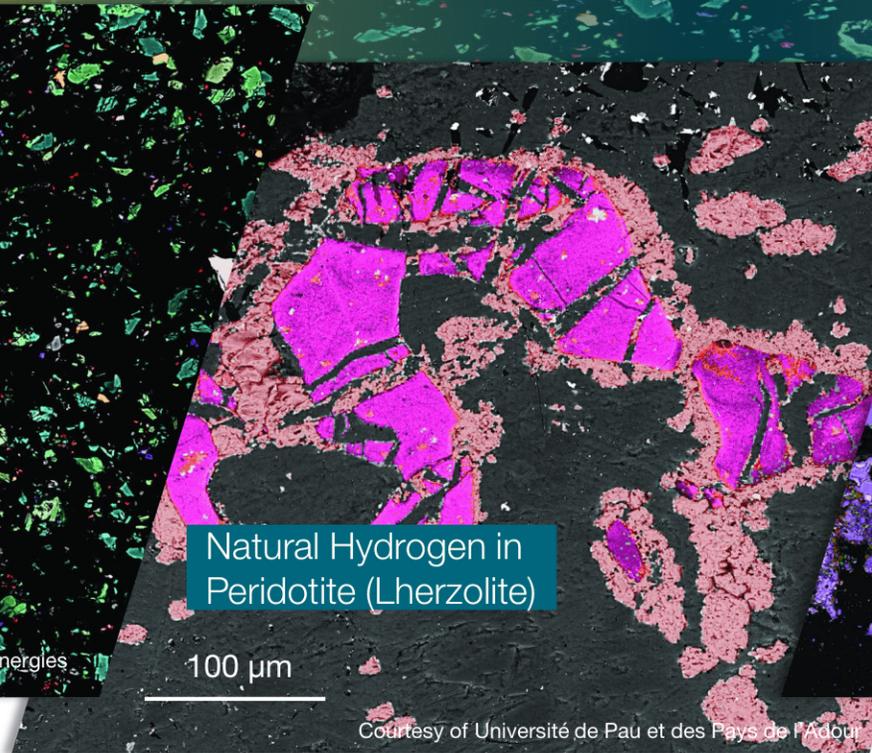

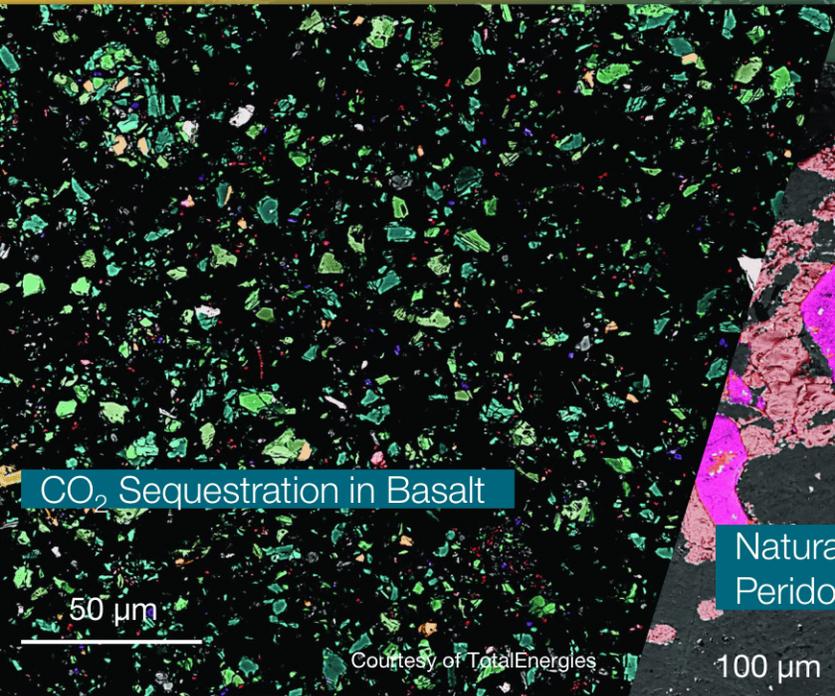

EDAX® OIM Matrix™ improves electron backscatter diffraction (EBSD) pattern analysis by comparing experimental EBSD measures to master patterns derived from both physics-based models or experimental benchmarks. Powered by state-of-the-art EDAX spherical indexing, this approach delivers more accurate and reliable results—especially for the complex and compositionally diverse minerals commonly found in geological materials.

Sample: Devonian-age granite collected with an EDAX Velocity™ EBSD camera and Octane Elite energy dispersive x-ray spectroscopy (EDS) detector at 500 points per second with simultaneous EDS and EBSD data.

www.edax.com

0900 – 0930	Registration & Coffee	
0930 - 1000	Panel Discussion: Collaboration in Lab Management, challenges, opportunities, and the eternal quest for funding	
1000 - 1010	Improved geological phase discrimination using spherical indexing	Rene De Kloe, <i>Gatan/EDAX</i>
1010 – 1030	Microscopic Meteorites: Art, Science and Stories from space	Lorelei Robertson, <i>University of Nottingham</i>
1030 – 1050	Building a pilot open-access correlative rock microscope	Marco A. Acevedo Zamora, Queensland University of Technology
1050 - 1110	Lithium to Uranium: A New Analytical SEM for Environmental Research hosted by UCL Earth Sciences	Andy Thompson, <i>University College London</i>
1110 – 1150	Break	
THEME THREE		
1150 - 1210	Micro to nanoscale characterisation of olivine, wadsleyite and ringwoodite in the Catherwood L6 ordinary chondrite and implications for the evolution of high-pressure mineral assemblages in planetary materials	Lee White, <i>Open University</i>
1210 - 1230	Hydrothermal Alteration of Isle of Rum Peridotite – A Jezero Crater Analogue	Cesca Willcocks, <i>University of Leicester</i>
1230 - 1250	Constraints on Basaltic Volcanism on Vesta: Insights from Pb-Pb Isotope Systematics in Eucrites	Hayley Lowe, <i>University of Manchester (Virtual)</i>
1250 - 1410	Lunch & Sponsor Networking	
1410 - 1420	Light Element Chemical State Analysis with New Soft X-ray Grating for SEM	Calum Dickinson, <i>JEOL (UK) Ltd</i>
THEME FOUR		
1420 - 1440	Out of Space, Under the Beam: Low-Dose SEM–EDS of Fragile Phases in Carbonaceous Chondrites and Asteroid Bennu Return Samples	Tobias Salge, <i>Natural History Museum</i>
1440 - 1500	4D STEM and Correlative EDS Analyses of Planetary Materials	Niamh Topping, <i>University of Leicester (Virtual)</i>
1500 - 1520	Novel Combinations of Quantum Diamond Microscopy and Electron Probe Microanalysis Reveal Intricate Intergrowths in an Unusual Meteorite	Jennifer T. Mitchell, <i>University of Minnesota</i>
1520 - 1530	Bruker XRM and XRF applications in the Geosciences	Stephan Le Roux, <i>Bruker</i>
1530 - 1600	Break	
THEME FIVE		
1600 - 1650	Keynote: Laser-induced breakdown spectroscopy (LIBS) as a tool for planetary exploration: From the macroscale to the microscale on Mars and beyond.	Candice Bedford, <i>Purdue University (Virtual)</i>
1650 - 1710	GSL Publications & closing words	

Discover Subsurface Insights for Energy Transition with Thermo Scientific™ Maps Min Software

Advanced Mineral & Microstructure Analysis for CO₂ Sequestration, Natural Hydrogen & Lithium Resources

Learn more at thermofisher.com/maps-min or email us at salome.larmier@thermofisher.com

Complete the workflow with Thermo Scientific™ Apreo ChemiSEM™

Convenors:

Natasha Stephen (GSL & Imperial College London, UK)

Cesca Willcocks (University of Leicester, UK)

Duncan Muir (Cardiff University, UK)

Jen Mitchell (University of Minnesota, USA)
