Evening Talk on Hong Kong's Participation in China's 41st Antarctic Expedition

What to expect

Six Hong Kong scientists, including Professor Lin Liu, participated in China's 41st Antarctic expedition, conducting field research at three key locations across Antarctica in 2024-25. This milestone highlights Hong Kong's expanding role in national and global scientific endeavours. Professor Liu will share his fieldwork experiences, insights from studying the warming cryosphere, and its worldwide implications.

About the speaker

Lin Liu is an Associate Professor of Earth and Environmental Sciences at The Chinese University of Hong Kong. His research leverages a diverse range of geodetics, geophysical, remote sensing, and deep learning techniques to investigate Earth's cryosphere, focusing on permafrost, glaciers, and ice sheets. In recognition of his pioneering work, he received the 2021 John Wahr Early Career Award from the American Geophysical Union for his innovative use of geodetic methods in studying the cryosphere. He also received Exemplary Teaching Awards from the Faculty of Science, CUHK in 2016 and 2023.

Details

Date: Tuesday 13 May 2025

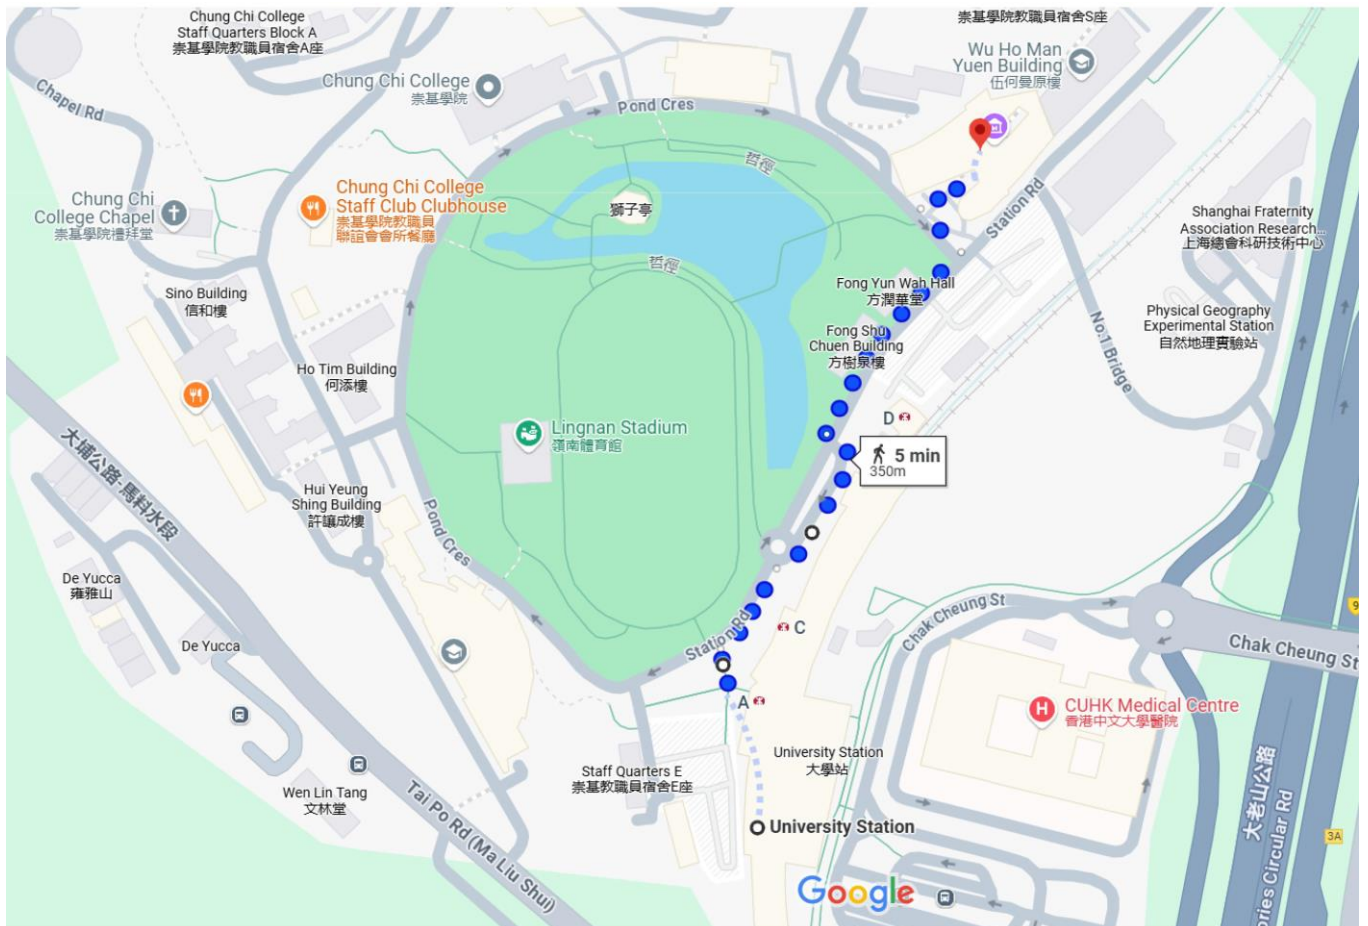

Time: 7-8 pm (GMT +8 - HKG Time)

Location: Hybrid - LT9, Yasumoto International Academic Park (YIA), CUHK or Zoom - details will be provided after successful registration

[**Register here**](#)

Event is jointly organised by the **Hong Kong Regional Group of The Geological Society**, the **Geological Society of Hong Kong** and the **CUHK Jockey Club Museum of Climate Change**

Directions to Yasumoto International Academic Park, CUHK

Exits A, C or D - University Station (East Rail Line)

Turn right and follow road to the YIA building located at the corner of Station Road - Pond Crescent junction.
