## FIELDTRIP: Demise of the Derbyshire carbonate platform

### 13-14 May 2022, led by Cambridge Carbonates Ltd

The Geological Society of London, in partnership with Cambridge Carbonates Ltd, presents a 2 day fieldtrip demonstrating the demise of the Dinantian Derbyshire carbonate platform from the Asbian through to the early Namurian.

The Derbyshire carbonate platform suffered an number of internal and external sedimentological and stratigraphic events that led to the shut down of carbonate production during the late Dinantian.

The northern and southern margins around Castleton and Wirksworth demonstrate the sequence stratigraphic relationships and detailed carbonate facies evolution that tell the story of the doomed carbonate platform. This trip includes a visit to a show cave.

#### LOCALITIES

The fieldtrip is based in the Peak District National Park.

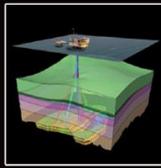

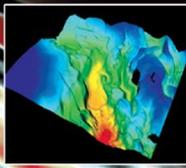

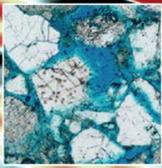

Transportation around the field area will be by minibus, which is included in the fieldtrip cost; meals, accommodation and show cave visit (estimated £ 7-50) is not included in the cost.

## FIELDTRIP: Demise of the Derbyshire carbonate platform

### 13-14 May 2022, led by Cambridge Carbonates Ltd

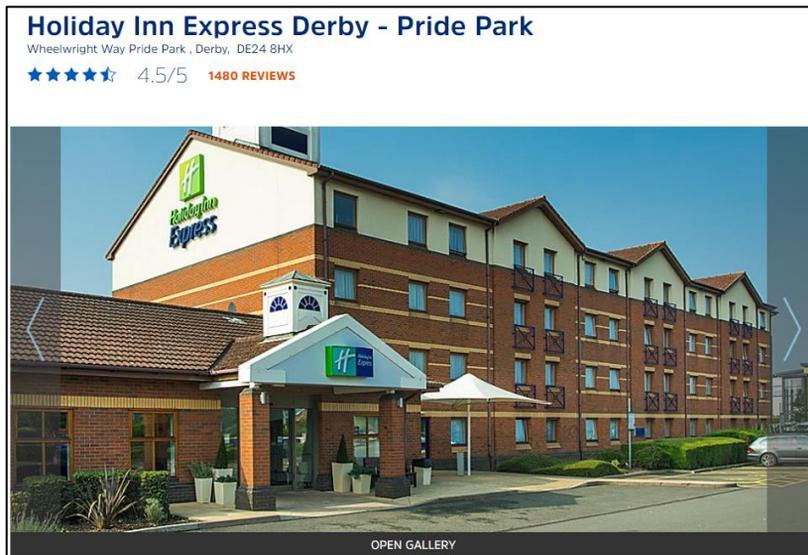

#### TIMINGS AND WHERE TO STAY

The fieldtrip takes place the day after the conference finishes. We suggest delegates travel to Derby by train on the Thursday evening. We recommend delegates stay at the Holiday Inn Express, Pride Park, Derby. This is walking distance from Derby train station.

<https://www.ihg.com/holidayinnexpress/hotels/us/en/derby/dbyuk/hotel/detail>

Delegates are asked to make their own hotel booking, and own arrangements for travelling to and from Derby.

We will meet delegates on the Thursday evening for dinner.

#### WHAT TO BRING

This field trip will involve outdoor activity in any weather conditions, so you are advised to wear sturdy footwear and comfortable clothing. British springtime weather can be highly variable, so please also bring a waterproof and warm layers in addition to sunscreen.
