

Groundwater Management in Construction

SERVING SCIENCE & PROFESSION

This one day meeting aims to promote links and discussion between experts from the groundwater and engineering communities.

Effective groundwater management is increasingly recognised as an essential part of construction. Engineers are often faced with issues of groundwater management. Hydrogeologists understand groundwater and can assist with the solution to these engineering problems.

The key objectives of the meeting are to:

1. highlight some of the specific challenges associated with groundwater in construction;
2. to bring hydrogeologists, geotechnical, civil and construction engineers together to share and discuss experiences and challenges and how these have been overcome;
3. to highlight recent experience from practitioners within the construction, engineering and groundwater communities and facilitate discussion on how best to bring specialists and experts together.

Date

11th June 2014

Time

Registration 9:30am
Talks 10:00am - 5:00pm
Drinks reception 5:00pm-7:00pm

Venue

The Geological Society, Burlington House, Piccadilly, London

Booking

Via The Geological Society website
