

# *Contents*

<i>Acknowledgments</i> .....	v
<i>Abstract</i> .....	1
<b>1. Introduction, setting, methods, and overview</b> .....	3
Introduction .....	3
Geologic setting .....	5
Methods .....	15
Overview of the Rosario segment of the Alisitos arc .....	15
<b>2. Analytical data</b> .....	17
Geochronology .....	17
Whole-rock geochemistry .....	18
Hf isotopes in zircon .....	20
<b>3. Central subaerial edifice</b> .....	23
Stratigraphy .....	23
Central subaerial edifice hypabyssal intrusions .....	33
Central subaerial edifice plutonic rocks—La Burra pluton .....	34
<b>4. Southern volcano-bounded basin</b> .....	39
Stratigraphy .....	39
Southern volcano-bounded basin hypabyssal intrusions .....	54
Southern volcano-bounded basin plutonic rocks—San Fernando pluton .....	55
<b>5. Northern fault-bounded basin</b> .....	59
Stratigraphy .....	59
Northern fault-bounded basin hypabyssal intrusions .....	78
Northern fault-bounded basin plutonic rocks—Los Martires pluton .....	79
<b>6. Time slice reconstruction</b> .....	85
Introduction .....	85
Time slice 1 .....	85

Time slice 2 . . . . .	88
Time slice 3 . . . . .	89
Postmagmatic deformation . . . . .	89
<b>7. Discussion of processes in extensional oceanic arcs, with conclusions . . . . .</b>	<b>91</b>
Eruptive styles of oceanic arc ignimbrites . . . . .	91
Tectonic triggers and controls for caldera collapse . . . . .	91
Styles of caldera collapse . . . . .	91
Caldera resurgence . . . . .	92
Caldera plumbing systems and incremental growth of plutons . . . . .	92
The caldera cycle . . . . .	93
Magma storage levels and comparison with velocity profiles in modern arcs . . . . .	95
Importance of silicic calderas in extensional oceanic arcs . . . . .	95
Conclusions . . . . .	96
<b>References cited . . . . .</b>	<b>99</b>
